Cedar Riener, PhD, is a cognitive and perceptual psychologist and Associate Professor of Psychology at Randolph-Macon College. His primary area of research focuses on our perception of the natural world and how the state of our body influences our perception. His second area of research interest is applying research in cognitive science to education. He also loves sharing the wonders of psychology and perception with diverse audiences, students young and old, through exploration of visual illusions and magic. He received his bachelor's degree in history of science from Harvard University and his Ph.D. in cognitive psychology from the University of Virginia.
